| Self-hosting | Git , Website , Movies , Photos , Minecraft , Notes |
| Tools | Neovim , Hyprland , Obsidian , Xan , Tailscale |

About

Hello! I am passionate about self-hosting and achieving digital independence. That is why I run my own servers at home, which eliminates my need for cloud services. This endeavor has given me experience administering systems on a small scale, which has helped me understand the work of backend and development operations engineers.

I also have limited experience with data analysis on the command line using [xan](#). I gained this experience from managing large amounts of data that is not large enough to warrant using dedicated SQL solutions.

My interest in law stems from my extensive efforts to enhance my internet anonymity and cybersecurity. I want to learn about the legal implications, including what they mean for consumers of online services and business adhering to data privacy regulations.
